THIS INFORMATION IS INTENDED FOR GUIDANCE PURPOSES ONLY. WE RECOMMEND THAT YOU DISCUSS YOUR SPECIFIC REQUIREMENT WITH OUR HEAD OFFICE, SALES MANAGERS OR YOUR LOCAL DENNIS DEALER.

Certificate of Conformity

Cylinder mowers powered by Honda GX Petrol Engine

Manufacturer:- Howardson Ltd, Howardson Works, Kirk Langley, Derby, DE6 4NJ. UK

Owner of Technical Document:- Mr I.D. Howard, Howardson Ltd, Howardson Works Kirk Langley, Derby, DE6 4NJ, UK

Notified Body:- AV Technology Ltd, AVTECH house, Arkle Avenue, Stanley Green Trading Estate, Handforth, Cheshire, SK9 3RW, UK

I the under signed Declare that these machines:-

Model	Cutting Width	Power (Honda)	Measured Sound Power Level	Guaranteed Sound Power Level	Serial Number
Razor Ultra 560	22" (560mm)	GX120	91dB Lwa	94dB Lwa	See Product ID range

Tested at:- Howardson Works test site September 2011

Complies with the applicable requirements of:-

- Machine Directive 2006/42/EC
- Noise Directive 2000/14/EC (Annex VI Procedure 1)

Managing Director

Ian Howard

Serial Numbers

NOTE

MAKE A NOTE OF THE SERIAL NUMBERS OF YOUR MACHINE & ENGINE AND ALWAYS QUOTE THEM IN ANY COMMUNICATION WITH PERSONNEL AT DENNIS.

MACHINE SERIAL NUMBER

ENGINE SERIAL NUMBER

Introduction

The reliability and quality of performance of this machine depends upon some simple care maintenance carried out regularly. This manual has been prepared to allow the user to carry out all such work.

It is advisable to read the instructions carefully. Proper care and attention will enable the machine to give a continuous, satisfactory, and reliable service. Failure to carry out regular lubrication and maintenance as outlined in this manual may render any guarantee or warranty invalid.

In the case of any difficulty, or if further information or advice is required, our Service Department is always at your call. In the interests of speed and accuracy of information please quote the serial numbers of the machine and engine when making enquiries.

For the mower, this is to be found on a plate attached to the engine deck. The engine number is stamped on either the crank case or the gear casing facing towards the front of the machine. We suggest you write the numbers on the front page of this book.

Machine Description

Manufactured with a 22" (56cm) cutting width this mower is powered by a 4 h.p. air cooled, single cylinder, four stroke, petrol engine. The rear roller and cylinder are powered via independent friction clutches. This allows infinite speed control of the machine independent of the cylinder speed.

In the design of the machine, special attention has been given to the importance of easy service and maintenance, with the construction based on a sectional assembly system. These are: "Rear Roller", "Handle Bar", "Cylinder", "Groomer", "Front Roller" and "Drive system", all of which can be readily removed from the "Chassis unit".

The groomer attachment between front roller and cylinder is independently driven and can be disengaged as required.

Important Safety Instructions

In order to operate the machine safely please follow these Health and Safety guidelines.

TRAINING

CAUTION

*READ THE INSTRUCTIONS CONTAINED IN THIS MANUAL WITH CARE. IF YOU ARE IN ANY DOUBT PLEASE ASK YOUR EMPLOYER OR CONTACT US DIRECT AT **DENNIS**.*

- Be familiar with the controls and the proper use of the equipment.
- Never allow children or people unfamiliar with these instructions to use the mower. Local regulations or insurance may restrict the age of the operator.
- Never mow while people, especially children, or pets are nearby.
- Keep in mind that the operator or user is responsible for accidents or hazards occurring to other people or their property.

PREPARATION

- While mowing always wear substantial footwear and long trousers. Do not operate the mower barefoot or in open sandals.
- Thoroughly inspect where the equipment is to be used and remove all stones, sticks, wire, bones and other foreign objects.

WARNING *PETROL IS HIGHLY FLAMMABLE AND WILL DAMAGE GRASS IF SPILT.*

- A) Store fuel in containers specifically designed for this purpose.
 - B) Refuel out doors and do not refuel whilst smoking.
 - C) Add fuel before starting the engine. Never remove the cap of the fuel tank or add petrol while the engine is running or when the engine is hot.
 - D) If petrol is spilled do not attempt to start the engine but move the machine away from the area of spill and avoid creating any sources of ignition until the vapours have dissipated.
- Replace damaged or faulty silencers.
 - Before using the machine always inspect the safety devices including the cut off switch and the blades for excessive wear or damage. Replace if necessary.

OPERATION

- Do not operate the engine in a confined space where dangerous **CARBON MONOXIDE** fumes can collect.
- Mow only in daylight or good artificial light.
- Avoid operating the machine in wet grass where feasible.
- Always be sure of your footing on slopes.
- Walk. Never run.
- Walk across the face of slopes, never up and down.
- Exercise extreme care on slopes when changing direction.
- Do not mow excessively steep slopes.
- Use extreme caution when reversing or pulling the machine towards you.
- Stop the blades if the mower has to be tilted for transportation when crossing surfaces other than grass and when transporting the mower to and from the area to be mown.
- Never operate the mower with defective guards or shields or without the safety devices, for example without the deflector plate or grassbox in place.
- Do not change the engine governor settings or overspeed the engine.
- Disengage all blades and drive clutches before starting.
- Start the engine carefully following the instructions with feet well away from the blades.
- Do not tilt the mower when starting the engine.
- Do not put hands or feet near or under rotating parts. Keep clear of the discharge opening at all times.
- Never pick up or carry the mower while the engine is running.

FOR THE LOCATION OF CONTROLS AND COMPONENTS REF. "MACHINE DESCRIPTION" PAGE 5.

ON / OFF SWITCH (Item 17)

This switch stops the engine and can be used to do so at anytime during the operation of the machine. Ensure it is in the "ON" position before attempting to start the engine.

DEADMANS CONTROL (Item 13)

This is an operator presence control. It must be raised before the cylinder can be engaged and held in until the cylinder is disengaged. It can be held with either the left or right control, and when driving will retain itself. When taking up drive without the cylinder engaged the lever will raise automatically as the "Control Hoop" is pressed. Releasing the lever with the cylinder engaged will cause the engine to stop.

PARKING BRAKE CONTROL (Item 14)

This controls the parking brake. It is only to be engaged when the machine is stationary, it is **NOT** to stop the machine while moving. To engage, (standing behind the machine) pull the lever toward you and rotate clockwise. Push or Pull the machine slightly until the brake lever engages in the rear axle. It will be clear when this has happened as the rear roller will lockup.

To disengage, pull the lever toward you and rotate anti-clockwise. Locate the lever in the retainer on the side plate.

THROTTLE CONTROL (Item 4)

This controls the RPM of the engine and the resultant speed of the machine. Pushing the lever down will increase the RPM, pulling it back returns the engine to idle.

CONTROL HOOP [DRIVE CONTROL] (Item 12)

This controls the machines movement. Pushing the lever towards the handle will engage the friction clutch and cause the machine to drive. Releasing the hoop will return it to the original position and stop the drive. Pushing the lever will also raise the "Deadmans" controls. This is to eliminate the need to hold the "Deadmans" lever while driving the machine. Before operating the "Control Hoop" the "Parking Brake" must be **disengaged**. Failure to do this will cause the engine to stop.

CYLINDER CONTROL (Item 15)

This controls the cylinder drive. Pushing the lever down will engage the friction clutch and cause the cylinder to rotate. Before the cylinder can be engaged the "Deadmans" lever must be held in. Failing to do this will cause the engine to stop.

GROOMER CONTROL (Item 16)

This controls the groomer drive. Engagement and disengagement must only be carried out when the cylinder is stationary. To engage, (standing behind the machine) rotate the lever forwards. To disengage, return the lever to point backwards.

CAUTION

BEFORE YOU OPERATE THIS MACHINE YOU MUST READ AND STUDY THIS MANUAL. IF YOU ARE IN ANY DOUBT PLEASE ASK YOUR EMPLOYER OR CONTACT US DIRECT.

FOR THE LOCATION OF CONTROLS AND COMPONENTS REF. "MACHINE DESCRIPTION" PAGE 5.

PREPARATION FOR USE

- Ensure the turf is free from stones or other obstructions which may damage the cutting cylinder.
- Check the machine (inc. engine) is serviceable, has all guards in place and has no visible damage.
- Check the engine oil level. (Full details are given in the ENGINE Manual supplied)
- Fill the fuel tank 3/4 full with unleaded petrol.
- Set the height of cut to the required level. (See Page 10)
- Ensure the Cylinder drive is disengaged.
- Ensure the parking brake is engaged.

CAUTION

IMPORTANT INFORMATION PLEASE READ ALL THE DETAILS IN THIS SECTION AND FAMILIARIZE YOURSELF AND ALL MACHINE OPERATORS WITH THE CONTENTS.

STARTING THE ENGINE

- Switch on the fuel tap.
- Switch the handlebar cut off switch to "**ON**".
- Set the throttle control to a half open.
- Shift the choke lever to the "**Closed**" position. (Note: The choke is not required if the engine is warm or the air temperature high.)
- Grasp the recoil start handle until resistance is felt, then pull it with force.
- Do not allow the starter grip to snap back against the engine. Return it gently to prevent damage to the starter.
- Once the engine is started, gradually "**Open**" the choke lever. (Warm-up running of 3-5 minutes is recommended.)
- Set the throttle control back to the idle position.

STOPPING THE ENGINE

- Set the throttle control to the idle position.
- Switch the handlebar cut off to **OFF**.
- Close the fuel tap.

TO COMMENCE DRIVING (TRANSPORT BETWEEN SITES / NO CUTTING)

- Ensure the "**Parking Brake**" is disengaged.
- Raise the "**Deadmans**" lever (Item 13)
- Press the "**Control Hoop**" (Item 12) to the handle bar to start moving.
- Set the "**Throttle control**" to increase / reduce speed.

STOP DRIVING

- Release the "**Control Hoop**".

TO COMMENCE CUTTING

- Raise the “**Deadmans**” lever (Item 13)
- Engage the “**Cylinder Control**” Lever (Item 15)
- Press the “**Control Hoop**” (Item 12) to the handle bar to start moving.
- Set the “**Throttle Control**” to increase / reduce speed.

TO STOP CUTTING

- Disengage the “**Cylinder Control**” Lever (Item 15)
- Release “**Deadmans**” lever

NOTE

*RELEASING THE “**DEADMANS**” LEVER WITH THE CUTTER ENGAGED WILL CAUSE THE ENGINE TO STOP.*

FITTING GRASSBOX

- Disengage the cylinder drive and wait for the cutter to stop rotating.
- Hold the grass box firmly on the lip of the aperture and place the other hand in the handle on the front of the box.
- Place the two locating tabs (projecting from the grass box support plates) into the slots on the machine side plate. Lower the front of the box until the box support plate's rest on the front cross bar of the machine. Ensure both box support plates are properly located before proceeding.

FITTING TRANSPORT WHEELS

Colour code:

Right hand wheel Green

Left hand wheel Red

- Lower the stand at the back of the machine (Item 19).
- Lift the machine into position as shown.
- Rotate cover (Item 18).
- Locate the wheel assembly over the hexagon shaft. Push fully on.
- Rotate knob (Item 20) and push slightly until it locates.
- Push knob (Item 20) fully in and rotate towards the back of the machine to lock.

SETTING FOR HEIGHT OF CUT

Always stop the engine before adjusting the height of cut. Failure to do this may result in severe injury.

The length of grass after cutting depends on the setting of the front roller in relation to the main frame of the machine.

The 'Click' system allows easy adjustment of the front roller position, each click representing a change of 0.5mm (0.020"). The roller is set to be equal on leaving the factory so when the arrows point forward on both decals the roller is level.

Check it is level using the setting bar between the front and rear roller with the underside of the screw leading on the bottom blade.

Either a ruler or pile of coins can be used to set the setting bar to the correct position. You are measuring the distance between the bar and the underside of the button head screw ('XX' in the Image below).

As an indication coins measure the following:-

- | | | |
|-----------------------|-----------------------|-------------------------|
| - 1p 1.58mm (0.063") | - 2p 1.80mm (0.071") | - 5p 1.73mm (0.067") |
| - 10p 1.84mm (0.072") | - 50p 1.84mm (0.072") | - £1.00 3.14mm (0.124") |

Remember height of cut is effected by moisture of turf , weight of machine and the thatch density. Different makes of machine cut at different heights when set to the same position with the setting bar. We suggest you set it to a couple of mm above your planned height and then come down in height by trial.

If on setting the height of operation you find it needs altering once on the green simply click the adjusters up or down the same on each side until the desired height of operation is achieved.

Always check height of cut/operation with the setting bar provided. Check in two positions i.e. one at either end of the cassette. Failure to do this could result in an uneven cut.

GROOMER (RAZOR ULTRA ONLY)

The groomer unit has been designed to be removed easily from the “**Chassis**” for maintenance purposes. It is driven from the cylinder by a robust timing belt.

The groomer is **NOT** a deep scarifier. Failure to use correct will invalidate the warranty and could cause damage to the drive system.

The tungsten tipped blades are designed for cutting and teasing up horizontal growths on fine turf prior to cutting with the cylinder. Its operating height should always be above or level with the setting bar that is 0 to +5mm depending on conditions. Regular use of the groomer will promote healthy sward and keep thatch growth under control.

To set:

- Slacken 2-off lock nuts (Item 1) ¼” turn [19mm spanner]
- Rotate the groomer equally both sides (Item 2) [19mm spanner]
- Align the grooves (Item 3) on the arm with the grooves on the machine side plates at the desired height.
- When set, tighten the lock nuts (Item 1).
- If the groomer reel is not required set it up out of the way at approximately 10mm above the operating height of cut.
- Beware of transporting machine with groomer in low position so as to avoid damage to tungsten tipped blades.

SETTING THE CYLINDER

The cylinder unit has been designed to be removed easily from the “**Chassis**”, for grinding and maintenance. The shear blade carrier pivots to bring the blade into a cut position with the cylinder. The cylinder to bottom blade is to be set when mounted in the “**Chassis**”.

To set:

- Slacken 2-off lock nuts (Item 1) ¼” turn [19mm spanner]
- Rotate the knobs (Item 2) anti-clockwise to bring the blade towards the cylinder.
- Check the setting using thin paper along the length of the cylinder.
- Adjust until it cuts along the whole length.
- When set, tighten the lock nuts (Item 1).
- Recheck Adjustment.
- Do **NOT** set the cylinder hard to the bottom blade. This will cause excessive wear of both components and increase fuel consumption.

HANDLE BAR ADJUSTMENT

The “**Handle bars**” are adjustable to achieve the correct working height for the operator.

To set:

- Slacken 4-off nuts (Item 1) $\frac{1}{4}$ ” turn [17mm spanner]
- Raise / lower the “Handle Bar” to the desired position”
- When set, tighten the nuts (Item 1).

ENGINE

The machine is fitted with a Honda GX120 petrol engine.

For full specifications please refer to the manufacturers instruction manual included.

Area	Maintenance	First 4 Hours	First Month / 20 Hours	3 Months / 50 Hours	6 Months / 100 Hours
Engine Oil	Check Level	✓			
Engine Oil	Change		✓		✓
Air Filter	Check Condition / Clean		✓		✓
Spark Plug	Change				✓

OIL / FUEL TYPE & QUANTITY - SPARK PLUG TYPE

Engine Model	Oil Type	Quantity (Ltr)	Fuel Type	Capacity (Ltr)	Spark Plug Type	Electrode Gap (mm)
Honda GX120 Petrol	SAE 10W-40	0.6	Unleaded	2.5	BM6ES or BPR6ES	0.7 - 0.8

DRIVING BELTS

The main drive to both rear roller and cassette is via hard wearing TBA poly-V type belts which provide for smooth trouble free operation. To ensure the best performance the following instructions should be carefully followed.

Belt tension is the single most important factor necessary for long, satisfactory service life of any belt drive.

Under-tensioning leads to belt slip causing rapid wear; over tensioning means excessive strain on belt and bearings. Between these two extreme conditions is a reasonable range of tension within which the belt will operate. Belt tension can be assessed by the 'deflection' method.

NOTE

CORRECTION CAN BE MADE BY ADJUSTMENT OF THE BELT TENSIONERS. REMOVE THE DRIVING BELT COVER. THE BELT TENSIONERS ARE RETAINED IN A SLOTTED HOLE ALLOWING ADJUSTMENT TO BE MADE ONCE THE HOLDING HEXAGON HEADED BOLTS HAVE BEEN LOOSENED. WHEN ADJUSTED CORRECTLY THE TENSIONERS SHOULD STILL ROTATE EASILY WITH FINGER PRESSURE. ENSURE THE TENSIONER BOLTS ARE SECURE BEFORE REPLACING THE COVER.

"Belts will be sufficiently tensioned if the deflection force applied at mid span to produce a deflection equal to 16mm per meter of span distance falls between 5 and 9 Newtons per Rib" (TBA Belting).

In practical terms this relates to about 5mm of deflection under moderate finger pressure on the non tensioner side.

If fitting new belts it is advisable to observe the drive for the first 20-30 minutes. It may be necessary to make an adjustment to compensate for the normal drop in tension during the run-in period.

CLUTCH CABLE ADJUSTMENT

Over time the cables that operate the friction clutches for the “**Cylinder**” and “**Rear Roller**” will need adjusting. This adjustment can be done at the “**Handle Bar**” or at the “**Chassis**”.

To set at “**Handle Bar**”

- Remove handle bar cover [4mm Allen key]
- Slacken 2-off lock nuts on relevant cable [10mm and 7/16” spanner]
- Adjust cable to desired tension. Note: Neither “**Cylinder**” or “**Rear Roller**” should operate with controls in **OFF** position.
- When set, tighten the lock nuts.

To set at “**Chassis**”

- Remove clutch cover [13mm spanner]
- Slacken 2-off lock nuts on relevant cable [2-off 13mm spanners]
- Adjust cable to desired tension. Note: Neither “**Cylinder**” or “**Rear Roller**” should operate with controls in OFF position.
- When set, tighten the lock nuts.

NOTE

ENSURE THE LOCK NUTS ARE TIGHT AND SECURE AND CHECK OPERATION IS SATISFACTORY BEFORE REPLACING THE CLUTCH COVER AND SCREWS.

Storage

The machine should always be kept in a clean dry place, free from condensation. After use ensure that the machine is thoroughly clean, dry and free from grass and mud. Before off season storage smear a thin layer of grease on to the cutter blades and the shear blade.

Under no circumstances must the machine be steam cleaned as this may remove grease from the pre packed bearings.

Because of the nature of lead free petrol we recomend that if the machine is being left unused for more than 2 weeks the carburetor is run dry. Allow the engine to run out of fuel with the fuel tap switched off.

REAR ROLLER

(6-months)

The main drive roller is split into three sections incorporating a differential gear system running in an oil bath. The old oil should be drained off and the bath replenished with 1 pint (550ml) of clean oil.

(1-month)

A grease point is located under the belt guard on the side plate of the machine. This is to lubricate the internal spur gear that provides drive to the rear roller. Apply one pump of grease. Do not over grease.

CONTROL LEVERS AND CABLES

(2-months)

Apply a small amount of oil to the control cables. Flow down the protective cables can be assisted by operating the lever a few times after lubricating.

FRONT ROLLER ADJUSTERS

(2-months)

Apply a small quantity of copper grease or similar to the adjuster studs to prevent corrosion and ease adjustment.
